

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

- 1               1. (original) A process for producing an acetyl anhydride comprising contacting  
2               methane and carbon dioxide in an anhydrous environment in the presence of effective amounts  
3               of a transition metal catalyst and a reaction promoter, and an acid anhydride compound, and  
4               optionally an acid, to produce a product comprising the acetyl anhydride.
  
- 1               2. (original) A process according to claim 1 further comprising:  
2               (b) contacting the product comprising the acetyl anhydride with water.
  
- 1               3. (original) A process according to claim 2 further comprising recovering  
2               acetic acid from step (b).
  
- 1               4. (original) A process according to claim 1 further comprising:  
2               (b) contacting the product comprising the acetyl anhydride with an alcohol.
  
- 1               5. (original) A process according to claim 4 further comprising recovering an  
2               acetate ester from the product of step (b).
  
- 1               6. (original) A process according to claim 4 further comprising  
2               recovering acetic acid from the product of step (b).
  
- 1               7. (original) A process according to claim 1 in which the catalyst is a  
2               vanadium-containing catalyst.
  
- 1               8. (original) A process according to claim 7 in which the catalyst is selected  
2               from vanadium pentoxide, vanadium trioxide, sodium metavanadate, vanadium-containing  
3               heteropolyacid catalysts and vanadyl acetylacetone.

1                   9. (original) A process according to claim 7 in which the catalyst is vanadyl  
2 acetylacetone.

1                   10. (original) A process according to claim 1 in which the reaction promoter is  
2 selected from K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>, K<sub>4</sub>P<sub>2</sub>O<sub>8</sub>, calcium dioxide, urea-hydrogen peroxide, and m-  
3 chloroperbenzoic acid.

1                   11. (original) A process according to claim 10 in which the reaction promoter is  
2 K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>.

1                   12. (original) A process according to claim 1 in which the acid anhydride  
2 compound comprises sulfur trioxide, sulfur dioxide, trifluoroacetic acid anhydride,  
3 fluoromethanesulfonic acid anhydride, trifluoromethanesulfonic acid anhydride, fluorosulfonic  
4 acid anhydride, methanesulfonic acid anhydride, NO, NO<sub>2</sub>, N<sub>2</sub>O<sub>5</sub>, P<sub>2</sub>O<sub>5</sub>, SeO<sub>3</sub>, As<sub>2</sub>O<sub>5</sub>, TeO<sub>3</sub>, or  
5 B<sub>2</sub>O<sub>3</sub> or a mixture of two or more of the foregoing.

6                   13. (currently amended)     A process according to claim 1 in which the acid  
7 anhydride compound [.]comprises trifluoroacetic acid anhydride.

1                   14. (original) A process according to claim 1 in which the acid anhydride  
2 compound comprises trifluoromethanesulfonic acid anhydride.

1                   15. (original) A process according to claim 1 in which the acid anhydride  
2 compound comprises sulfur trioxide.

3                   16. (original) A process according to claim 1 in which the acid anhydride  
4 compound comprises fuming sulfuric acid.

1                   17. (original) A process according to claim 1 in which an acid is present during  
2 the contacting.

1                   18. (original) A process according to claim 17 in which the acid comprises  
2 trifluoroacetic, methanesulfonic, fluorosulfonic, fluoromethanesulfonic,  
3 trifluoromethanesulfonic, sulfuric, fuming sulfuric, sulfurous, nitric, nitrous, phosphoric,

4 phosphorous, superphosphoric, or boric acid, or a selenium- and tellurium-containing analog of  
5 the sulfur-containing acids, or a mixture of two or more of the foregoing.

1               19. (original) A process according to claim 17 in which the acid comprises  
2 fuming sulfuric acid.

1               20. (original) A process according to claim 17 in which the acid comprises  
2 trifluoroacetic acid.

1               21. (original) A process according to claim 17 in which the acid comprises  
2 trifluoromethanesulfonic acid.

1               22. (original) A process according to claim 1 in which the acetyl anhydride  
2 comprises acetyl sulfate.

1               23. (original) A process according to claim 1 in which the acetyl anhydride  
2 comprises acetyl trifluoroacetate.

1               24. (original) A process according to claim 1 in which the acetyl anhydride  
2 comprises acetyl trifluoromethanesulfonate.

1               25. (original) A process according to claim 1 in which the temperature is from  
2 about 10 to about 200 °C.

1               26. (original) A process according to claim 1 in which the temperature is from  
2 about 60 to about 100 °C.

1               27. (original) A process for producing acetic acid comprising:

2               (a) contacting methane and carbon dioxide in an anhydrous environment in the  
3 presence of effective amounts of a transition metal catalyst and a reaction promoter, and an acid  
4 anhydride compound, and optionally an acid, to produce a product comprising an acetyl  
5 anhydride; and

6               (b) contacting the product of step (a) with water.

1                   28. (original) A process according to claim 27, further comprising:  
2                   (c) recovering acetic acid from the product of step (b).

1                   29. (original) A process according to claim 27 in which the catalyst is a  
2                  vanadium-containing catalyst.

1                   30. (original) A process according to claim 29 in which the catalyst is selected  
2                  from vanadium pentoxide, vanadium trioxide, sodium metavanadate, vanadium-containing  
3                  heteropolyacid catalysts and vanadyl acetylacetone.

1                   31. (original) A process according to claim 29 in which the catalyst is vanadyl  
2                  acetylacetone.

1                   32. (original) A process according to claim 29 in which the reaction promoter is  
2                  selected from K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>, K<sub>4</sub>P<sub>2</sub>O<sub>8</sub>, calcium dioxide, urea-hydrogen peroxide and m-  
3                  chloroperbenzoic acid.

1                   33. (original) A process according to claim 32 in which the reaction promoter is  
2                  K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>.

1                   34. (original) A process according to claim 27 in which the acid anhydride  
2                  compound comprises sulfur trioxide, sulfur dioxide, trifluoroacetic acid anhydride,  
3                  trifluoromethanesulfonic acid anhydride, fluoromethanesulfonic acid anhydride, fluorosulfonic  
4                  acid anhydride, methanesulfonic acid anhydride, NO, NO<sub>2</sub>, N<sub>2</sub>O<sub>5</sub>, P<sub>2</sub>O<sub>5</sub>, SeO<sub>3</sub>, As<sub>2</sub>O<sub>5</sub>, TeO<sub>3</sub>, or  
5                  B<sub>2</sub>O<sub>3</sub>, or a mixture of two or more of the foregoing.

1                   35. (original) A process according to claim 27 in which the acid anhydride  
2                  compound comprises trifluoroacetic acid anhydride.

1                   36. (original) A process according to claim 27 in which the acid anhydride  
2                  compound comprises trifluoromethanesulfonic acid anhydride.

1                   37. (original) A process according to claim 27 in which the acid anhydride  
2                  compound comprises sulfur trioxide.

3                   38. (original) A process according to claim 27 in which the acid anhydride  
4 compound comprises fuming sulfuric acid.

1                   39. (original) A process according to claim 27 in which an acid is present during  
2 the contacting.

1                   40. (original) A process according to claim 39 in which the acid comprises  
2 trifluoroacetic, fluorosulfonic, methanesulfonic, fluoromethanesulfonic,  
3 trifluoromethanesulfonic, sulfuric, fuming sulfuric, sulfurous, nitric, nitrous, phosphoric,  
4 phosphorous, superphosphoric or boric acid, or a selenium- or tellurium-containing analog of the  
5 sulfur-containing acids, or a mixture of two or more of the foregoing.

1                   41. (original) A process according to claim 39 in which the acid comprises  
2 fuming sulfuric acid.

1                   42. (original) A process according to claim 39 in which the acid comprises  
2 trifluoroacetic acid.

1                   43. (original) A process according to claim 39 in which the acid comprises  
2 trifluoromethanesulfonic acid.

1                   44. (original) A process according to claim 27 in which the acetyl anhydride  
2 comprises acetyl sulfate.

1                   45. (original) A process according to claim 27 in which the acetyl anhydride  
2 comprises acetyl trifluoroacetate.

1                   46. (original) A process according to claim 27 in which the acetyl anhydride  
2 comprises acetyl trifluoromethanesulfonate.

1                   47. (original) A process according to claim 27 in which step (a) is conducted at  
2 a temperature of from about 10 to about 200 °C.

1                   48. (original) A process according to claim 27 in which the step (a) is conducted  
2 at a temperature of from about 60 to about 100 °C.

1           49. (original) A process according to claim 27 further comprising recovering  
2 acetic acid from step (b).

1           50. (original) A process according to claim 39 in which an acid corresponding to  
2 the acid used in step (a) is recovered from step (b), and said acid is recycled to step (a).

1           51. (original) A process for the production of an acetate ester comprising:

2           (a) contacting methane and carbon dioxide in an anhydrous environment in the  
3 presence of effective amounts of a transition metal catalyst and a reaction promoter, and an acid  
4 anhydride compound, and optionally an acid, to produce a product comprising an acetyl  
5 anhydride; and

6           (b) reacting the product of step (a) with an alcohol to produce a product comprising an  
7 acetate ester.

1           52. (original) A process according to claim 51, further comprising  
2           (c) recovering the acetate ester from the product of step (b).

54. (original) A process according to claim 51 in which the product of step (b) further comprises acetic acid, said process further comprising:

(c) recovering acetic acid from the product of step (b).

54. (canceled)
